

PUMP REPAIR AND SERVICE

OFFICIAL TECHNICAL SERVICE

BLAUNAVAL
PROFESSIONAL

PUMP SERVICE + REPAIR

Bring your pump!

Our service team understands marine pump equipment from inside out.

An exceptional level of repair & overhaul services for superyacht pump systems. Whether you need a seal replacement or a complete overhaul, BLAUNAVAL PRO OTS is the right choice!

Our state-of-the-art repair center and performance test rig along with our highly qualified staff will ensure a quick and reliable service.

Once the evaluation of the pump is completed, our technicians will establish a course of action and make the adequate recommendations (including pump condition reports).

GIANNESCHI®
pumps and blowers

calpeda

JETS™

SPXFLOW

BBA Pumps

Rheinstrom®

All brands.

We service all brands of Heavy Duty Marine pumps like Gianneschi Pumps, Calpeda, Johnson-SPX, Bba, Rheinstrom, JETS Vacuum, etc...

All pumps are tested and delivered with a report.

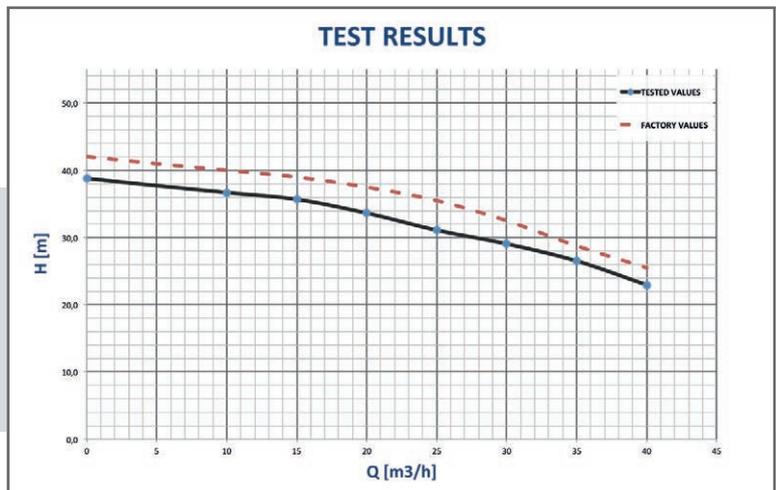

PUMP PERFORMANCE TESTING

By carrying out the complete pump repair in-house, pumps are tested for the flow performance (Q/H curve) ensuring their factory operation condition design (Proven performance before dispatch).

Test Report

We make a hydraulic performance test report complete with data points and Q/H curve

Why should you test your PUMP?

Regular pump testing can identify problems before a breakdown occurs (or KW-energy consumption climbs) or can give an easy warning of internal pump erosion/wear. This allows you to perform a predictive maintenance analysis to identify when it can be profitable to invest in a retrofit or repair. When a pump no longer delivers the required flow and pressure, that indicates the pump may require rebuilding to restore the original performance. However, there may be other conditions that affect the pump's performance that should be reviewed before assuming the pump is the problem!

Main pumps like FIRE, BILGE, A/C Cooling, Hydrophores, Waste etc should be tested every 1 to 2 years depending on the annual usage and severity of operating conditions.

PUMP CALCULATION & INSTALLATION ADVICE

Improve your system.

We will source and support you to select the right pump to meet your requirements and /or to improve your current pump system.

Making the right choice.

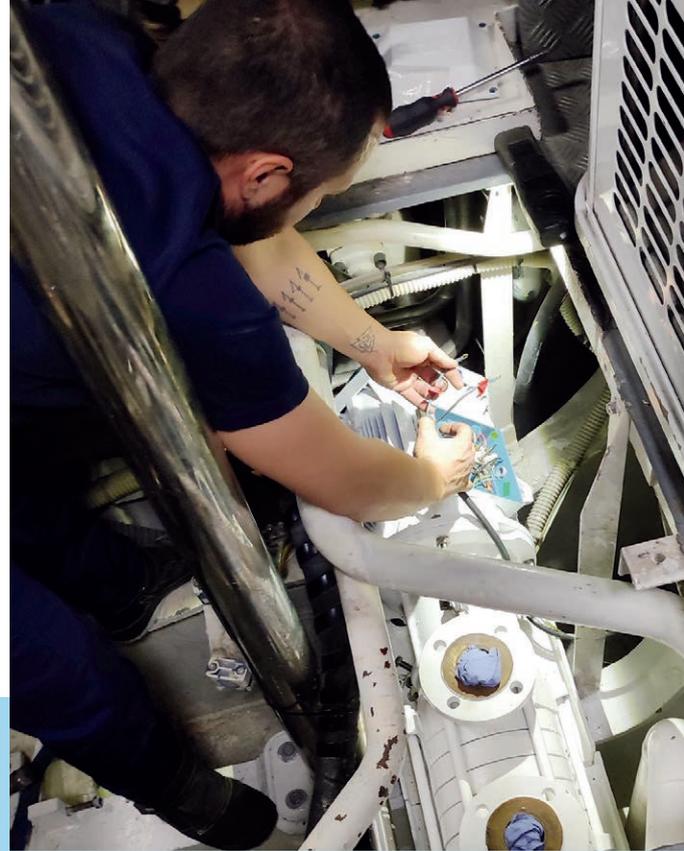

By making the right choice of pump the first time, at the right price, with the correct application, will save you money upfront and reduce any ongoing maintenance and servicing costs.

MAINTENANCE CONTRACTS

Annual inspection.

An annual inspection is essential to ensure your pumps are running OK before the season starts. We check & service the integrity of the pumps to ensure they are ready for the season, supported by keeping historical reports of the maintenance services.

Test your pump.

Do not wait to test your pump for the 1st time once the owner is onboard!

Carry out predictive maintenance and identify problems before they appear to minimize risks!

FANS & FIRE DAMPERS

We help you selecting you to select the right fan to meet your requirements and /or to improve your current fan system

Calculation of fans based on old-existing models, system upgrade with variable speed controllers (AC/DC), Axial or centrifugal, high performance models, etc
